Suola Gar Slip-Resistant

La suola slip resistant Gar, ha uno speciale disegno che favorisce una maggiore superficie d'appoggio, le piccole parti del fondo favoriscono la fuoriuscita dei liquidi sulle varie superfici.

La speciale tecnologia brevettata RPU garantisce uno speciale materiale resistente allo scivolamento pur rispettando le ottime caratteristiche di abrasione.

Gar Slip-Resistant outsole

The Gar slip-resistant outsole has a special tread pattern that allows more walking surface, whilst the small parts on its pattern help liquids go out faster.

Its special RPU patented technology guarantees a special material that is resistant to slipping and has a great resistance to abrasion at the same time.

Gar Semelle Antidérapante

La semelle antidérapante GAR est dotée d'un design spécial permettant une plus grande surface de marche et d'adhérence, tandis que des petites parties de cette conception aident à une évacuation plus rapide de l'eau. Sa technologie RPU brevetée garantit un matériau spécial qui évite les glissements et offre simultanément une résistance à l'abrasion.
